WELCOME

Thank you for downloading Eleven Ways to Use AI to Strengthen Your Career Positioning.

If you are feeling uncertain about how artificial intelligence may affect your career, you are not alone. Many professionals are watching workplace expectations change in real time. Some are concerned about layoffs. Some are trying to understand which skills will matter most in the future. Others know they should begin learning how to use AI, but they are overwhelmed by the number of tools, headlines, and opinions competing for their attention.

The good news is that you do not have to master everything at once. You do not need to become a software engineer. You do not need to learn every AI platform. You do not need to reinvent your entire career overnight. You simply need a clear place to begin.

This guide was created to help you use AI in practical, realistic ways to strengthen the way you understand, present, and communicate your professional value.

Inside, you will discover eleven ways to use tools such as ChatGPT, Claude AI, Perplexity, and Gemini to:

- Identify transferable skills you may be overlooking.
- Recognize accomplishments hidden inside your everyday responsibilities.
- Strengthen your resume, cover letter, and LinkedIn profile.
- Research realistic career pathways.
- Prepare for interviews and professional conversations.
- Create a focused next-step plan.

You can move through this guide in order, or use the clickable table of contents to jump directly to the area where you need the most support.

My goal is not to overwhelm you with technology. My goal is to help you become more valuable, not more vulnerable, as the workplace continues to change.

You are not too late. You are getting started at the right time.

MY MISSION

WHY THIS MATTERS NOW

Many companies are restructuring as they invest in artificial intelligence, but a large number are still trying to figure out how to implement AI effectively. That is exactly why it is so important to get on the AI train right now.

The workplace is changing while the systems are still being built. Job descriptions are evolving. Workplace expectations are shifting. Skills that once felt optional are becoming increasingly valuable.

At the same time, many professionals are waiting because they believe they need more time, more technical knowledge, or a perfect plan before they begin. You do not need a perfect plan. You need a practical starting point.

My mission is to help everyday professionals become more valuable, not more vulnerable, as artificial intelligence continues to change the workplace.

I believe people should not wait until AI skills become a standard requirement in every job description before they begin learning how to use these tools. This is the time to practice. This is the time to explore. This is the time to learn how AI can help you identify your strengths, communicate your value more clearly, research realistic opportunities, and build a stronger professional strategy.

You do not have to become a software engineer. You do not have to learn every AI platform. You do not have to understand every technical term. You simply need to begin using the right tools for the right tasks.

The professionals who start now are giving themselves time to learn, adapt, and grow before the pressure becomes heavier. That is what it means to become more valuable, not more vulnerable.

WHAT CAREER POSITIONING MEANS

Career positioning is the way you present your experience, skills, strengths, and professional value so that other people can understand what you bring to the table. It is not just about having a resume. It is not just about applying for jobs. Career positioning is about making your professional story clear.

You may already have years of valuable experience, but if your resume, LinkedIn profile, cover letter, or interview answers do not explain that experience clearly, other people may overlook your strengths. That is where AI can help.

AI can help you organize your thoughts, identify patterns in your experience, recognize transferable skills, improve the way you describe your accomplishments, and research opportunities that align with your background.

It can also help you avoid one of the biggest career mistakes people make: assuming that other people will automatically understand the value of your experience. A hiring manager, recruiter, client, or professional contact may only spend a short amount of time reviewing your information. Your goal is to make your value easier to understand.

Strong career positioning helps you answer questions such as:

- What do I do well?
- What problems can I solve?
- Which skills have I developed through my work and life experience?
- Which opportunities match my strengths?
- How should I explain my value on my resume and LinkedIn profile?
- What should I focus on learning next?

Career positioning does not mean pretending to be someone you are not. It means communicating who you already are more clearly and strategically. The eleven steps in this guide will help you begin that process.

WHY LEARN WITH TIFFANY SACHEL?

I am not teaching artificial intelligence as a distant theory. I am actively using AI to build, organize, and strengthen my own professional ecosystem.

Through Tiffany Satchel Press, I am developing an AI-supported consulting business focused on helping everyday professionals and business owners bring structure to scattered ideas, strengthen their professional positioning, and use AI more intentionally.

I created Authority Systems Weekly as a practical learning hub for professionals and career changers who want clear, beginner-friendly guidance as workplace expectations continue to evolve.

I am also building The Eleven Eleven Method, a structured framework designed to help people turn their knowledge, voice, and ideas into repeatable systems that support long-term growth.

My work with AI has also expanded into intellectual property. I used AI to help build Hidden Hymns Archives, a digital music catalog designed to create long-term assets, compounding income, and a foundation for generational wealth.

AI is not only a tool for completing tasks faster. It can also help you identify opportunities, organize your ideas, strengthen your professional story, and create systems that continue working after the initial effort is complete.

My professional development includes:

- Adobe Job Application Essentials Certification
- Adobe Promote Community Events With AI Certification
- AI Certificate Program through the University of Maryland Smith School of Business
- Active development of Authority Systems Weekly
- AI-supported consulting and systems development through Tiffany Satchel Press
- The Eleven Eleven Method
- Hidden Hymns Archives digital music catalog

My goal is not to convince you to learn every AI platform. My goal is to help you understand how the right tools can support the right tasks so you can communicate your value more clearly, make stronger career decisions, and prepare for a changing workplace.

HOW TO USE THIS GUIDE

You do not need to complete all eleven steps at once. This guide was designed so you can begin with the area that feels most important right now. You may decide to move through the guide in order, or use the clickable table of contents to jump directly to the section that best matches your current need.

Each section will explain:

- What the step means
- Why the step matters
- Which AI platforms may be most helpful
- How to begin using AI for that task
- A practical example
- Support options if you want help putting the step into action

You will see recommendations for tools such as ChatGPT, Claude AI, Perplexity, and Gemini throughout the guide. You do not need to use all four platforms. Start with the tool that feels easiest to access and understand.

The goal is not to become overwhelmed by technology. The goal is to use AI more intentionally. You can return to this guide whenever your goals change, your resume needs an update, your LinkedIn profile needs attention, or you want to prepare for a new professional opportunity.

Start where you are. Choose one step. Take one practical action. Then build from there.

One. Identify Your Transferable Skills

Seven. Strengthen Your LinkedIn Profile

Two. Uncover Accomplishments Hidden Inside Your Responsibilities

Eight. Research Career Paths That Match Your Experience

Three. Clarify Your Professional Brand

Nine. Identify Skill Gaps and Learning Priorities

Four. Tailor Your Resume for a Specific Opportunity

Ten. Prepare for Interviews and Professional Conversations

Five. Strengthen Your Professional Summary

Eleven. Build a Personalized Career Action Plan

Six. Improve Your Cover Letter

RECOMMENDED AI PLATFORMS

You do not need to learn every AI platform before you begin. Different tools can support different parts of your career-positioning process. Start with the platform that feels easiest to access and understand.

CHATGPT

Best for: Brainstorming, organizing ideas, revising written materials, and creating practical action plans.

You may use ChatGPT to:

- Identify transferable skills
- Turn routine responsibilities into stronger accomplishment statements
- Draft or revise resume bullet points
- Improve your professional summary
- Brainstorm LinkedIn headlines
- Practice interview questions
- Create a weekly career-action plan

CLAUDE AI

Best for: Reviewing longer materials, comparing documents, and improving the clarity and structure of your professional story.

You may use Claude AI to:

- Review your resume and cover letter together
- Compare your resume with a job description
- Identify missing information
- Organize your experience into clear themes
- Suggest revisions while preserving your original meaning

PERPLEXITY

Best for: Researching current information before making career decisions.

You may use Perplexity to:

- Research job titles connected to your experience
- Explore current industry trends
- Identify skills employers are requesting
- Research companies before applying
- Compare certification options
- Prepare thoughtful questions for an interview

GEMINI

Best for: Brainstorming, planning, organizing ideas, and getting an additional perspective.

You may use Gemini to:

- Explore possible career directions

- Generate alternative wording
 - Brainstorm networking messages
 - Organize your next steps
 - Create a simple checklist
-

A SIMPLE REMINDER

You do not have to use all four platforms. Begin with one tool. Choose one task. Take one practical step. The goal is to use the right tool intentionally so you can strengthen your professional positioning one step at a time.

ONE. IDENTIFY YOUR TRANSFERABLE SKILLS

WHAT THIS MEANS

Transferable skills are abilities you have developed in one job, industry, business, volunteer role, or life experience that can also be valuable in another professional setting. You may have more transferable skills than you realize. Many people describe their experience only by naming their job title or listing routine duties. AI can help you look beneath the job title and identify the skills you were actually using every day.

WHY THIS MATTERS

When you begin exploring a new job, industry, or professional direction, you may assume that you have to start over. That is not always true. Your previous experience may already contain valuable skills that can transfer into a new opportunity.

Someone who has worked in customer service may have developed skills in communication, problem-solving, conflict resolution, client support, active listening, time management, multitasking, documentation, and decision-making. A small-business owner may have developed skills in project planning, client communication, sales, marketing, budgeting, research, content creation, and strategic decision-making. AI can help you identify the connections.

RECOMMENDED AI PLATFORMS

- ChatGPT
- Claude AI
- Gemini

HOW TO BEGIN

Start by gathering information about your experience. Include previous job titles, daily responsibilities, volunteer work, business experience, certifications, training, projects, leadership responsibilities, problems you solved, and tasks people regularly trusted you to handle. Then use AI to help you identify the skills hidden inside those experiences. Do not ask AI to invent qualifications. Ask it to help you recognize and organize the value that is already there.

PRACTICAL EXAMPLE

Imagine that you worked in a busy convenience store. You may initially describe your work as: helped customers, handled money, stocked shelves, and completed daily tasks. That description is accurate, but it does not show the full professional value of the experience.

A stronger review of the same work may reveal skills in high-volume customer service, cash-handling accuracy, inventory support, conflict resolution, team communication, prioritization during busy periods, operational support, safety awareness, and working independently. Those skills may support future opportunities in operations, customer support, administration, transportation, workforce coordination, or business services.

YOUR FIRST ACTION STEP

Choose one previous job, volunteer role, or business experience. Write down what you were responsible for, what problems you solved, what people relied on you to handle, what you learned to do well, and what became easier because you were there. Then use ChatGPT, Claude AI, or Gemini to help you identify the transferable skills inside that experience.

TWO. UNCOVER ACCOMPLISHMENTS HIDDEN INSIDE YOUR RESPONSIBILITIES

WHAT THIS MEANS

A responsibility explains what you were expected to do. An accomplishment explains the value you created while doing it. Many people struggle with career positioning because they describe their work only as a list of duties. AI can help you ask better questions so you can uncover the results, improvements, problem-solving, and reliability hidden inside your everyday work.

WHY THIS MATTERS

Employers want to understand how you contributed. They want to know what became easier, faster, more organized, more accurate, more profitable, or more effective because you were there. Real accomplishments can include: helping customers resolve problems quickly, reducing confusion by keeping records organized, supporting a busy team during high-pressure periods, maintaining accuracy while completing repetitive tasks, and completing work consistently without needing close supervision. The challenge is learning how to explain them clearly.

RECOMMENDED AI PLATFORMS

- ChatGPT
- Claude AI
- Gemini

HOW TO BEGIN

Choose one role from your work history. Write down five to ten responsibilities you handled regularly. Then ask yourself: What problems did I solve? What did I improve? What did I organize? What did I make easier? What did people trust me to handle? Then use AI to help you turn those answers into clear professional statements.

PRACTICAL EXAMPLE

Instead of writing "Answered phones, scheduled appointments, and handled paperwork," a stronger version may read: "Coordinated appointment scheduling and maintained organized records to support smooth daily operations. Handled incoming calls, answered questions, and routed concerns efficiently to reduce delays."

Instead of writing "Posted on social media for a small business," a stronger version may read: "Created and organized social-media content that helped the business maintain a consistent online presence." AI should not exaggerate your experience. It should help you communicate your real contribution more effectively.

YOUR FIRST ACTION STEP

Choose one previous job, business role, or volunteer experience. Write down five responsibilities. For each responsibility, answer: What became better because I handled this task well? What problem did I help solve? What value did I create? Then use ChatGPT, Claude AI, or Gemini to help you turn those answers into accomplishment statements. Review the final wording carefully and make sure every statement is accurate.

THREE. CLARIFY YOUR PROFESSIONAL BRAND

WHAT THIS MEANS

Your professional brand is the clear, consistent message people receive about who you are, what you do well, and the type of value you bring. It is not just your job title, your resume, or your LinkedIn headline. Your professional brand is the larger story connecting your experience, strengths, interests, accomplishments, and professional direction.

WHY THIS MATTERS

Many professionals have valuable experience but struggle to explain it clearly. AI can help you identify patterns. It can review your work history, accomplishments, skills, training, and interests to help you notice recurring themes. For example, you may discover that your real strength is helping people solve problems calmly, keeping operations organized during busy periods, turning confusing information into clear instructions, or improving communication within a team.

RECOMMENDED AI PLATFORMS

- ChatGPT
- Claude AI
- Gemini

HOW TO BEGIN

Gather your previous job titles, strongest responsibilities, accomplishments, transferable skills, certifications, and training. Then use AI to look for patterns. Ask: What strengths appear repeatedly throughout my experience? What problems do I seem to solve most often? How could I explain my professional direction more clearly?

PRACTICAL EXAMPLE

Imagine that someone has worked in retail, customer service, transportation, and administrative support. At first, the experience may appear scattered. But after reviewing the work carefully, several themes may emerge: strong communication, problem-solving under pressure, time-sensitive decision-making, customer support, organization, and adaptability.

A clearer professional brand may sound like: "I am an operations-focused professional with experience supporting customers, solving problems, managing time-sensitive responsibilities, and helping daily systems run more smoothly."

YOUR FIRST ACTION STEP

Write down three tasks you do well, three problems you solve effectively, three qualities people regularly rely on you for, three accomplishments you are proud of, and three types of work you enjoy most. Then use ChatGPT, Claude AI, or Gemini to help you identify the strongest patterns. Choose the brand statement that feels accurate, clear, and natural.

FOUR. TAILOR YOUR RESUME FOR A SPECIFIC OPPORTUNITY

WHAT THIS MEANS

A strong resume should not look exactly the same for every job. Your experience may stay the same, but the way you present that experience should change based on the opportunity you are pursuing. AI can help you compare your resume with a specific job posting so you can see which parts of your experience deserve more attention. Tailoring your resume does not mean changing the truth. It means making the most relevant parts of your experience easier to see.

WHY THIS MATTERS

Many people use one resume for every application. Hiring managers and recruiters often review applications quickly. A resume that tries to say everything may end up saying nothing clearly. The goal is to make the most relevant part of your experience easier to see.

RECOMMENDED AI PLATFORMS

- ChatGPT
- Claude AI

Perplexity may also be helpful when you want to research the company, the industry, or the role before applying.

HOW TO BEGIN

Gather your current resume, the full job description, the company website, a list of your actual skills and experience, and any accomplishments connected to the role. Ask AI to compare your resume with the job posting. Ask which skills already appear in your experience, which relevant skills are missing, which bullets should receive more emphasis, and which keywords should be included if they accurately reflect your experience. Review each recommendation carefully.

PRACTICAL EXAMPLE

Imagine you have experience in retail, customer service, and transportation and are applying for an operations-coordinator role. A tailored version may emphasize managing time-sensitive responsibilities, supporting daily operations, maintaining accurate records, responding to unexpected problems, communicating clearly, following safety procedures, and prioritizing tasks during busy periods. The experience did not change. The focus changed.

YOUR FIRST ACTION STEP

Choose one job posting that interests you. Read the description carefully and highlight the main responsibilities, most frequently mentioned skills, and required qualifications. Use ChatGPT or Claude AI to identify what already matches, what deserves more attention, and what can be rewritten more clearly. Save your updated version with a clear file name such as: Tiffany_Satchel_Operations_Coordinator_Resume.

FIVE. STRENGTHEN YOUR PROFESSIONAL SUMMARY

WHAT THIS MEANS

Your professional summary is the short section near the top of your resume that gives the reader a clear snapshot of who you are professionally. It should quickly explain what type of professional you are, which strengths are most relevant, what kind of experience you bring, and what value you can offer. A professional summary should not be vague or sound like a collection of generic phrases.

WHY THIS MATTERS

Hiring managers and recruiters may review many resumes in a short amount of time. A weak summary such as "Hardworking professional with strong communication skills seeking an opportunity to grow" does not explain what type of work you have done, what problems you solve, or why the employer should keep reading. A stronger professional summary creates context and gives the reader a reason to pay attention.

RECOMMENDED AI PLATFORMS

- ChatGPT
- Claude AI
- Gemini

HOW TO BEGIN

Gather your current resume, your strongest transferable skills, your most relevant accomplishments, and the type of role you want. Ask AI to create several professional-summary options. Use AI to brainstorm. Then revise the language until it sounds like you.

PRACTICAL EXAMPLE

A weak version: "Hardworking customer-service professional with excellent communication skills seeking a new opportunity."

A stronger version: "Customer-service and operations professional with experience supporting high-volume environments, resolving customer concerns, managing time-sensitive responsibilities, and helping daily systems run smoothly." The stronger version explains the value more effectively.

TAILOR THE SUMMARY TO THE OPPORTUNITY

Your summary may need to change depending on the role. For an operations role, emphasize organization, scheduling, and workflow support. For a customer-service role, emphasize client support and conflict resolution. For an administrative role, emphasize documentation, coordination, and time management. The goal is to make the most relevant part of your experience easier to see.

YOUR FIRST ACTION STEP

Write down your current or most recent professional role, three strengths you use regularly, two problems you solve well, and the type of opportunity you want next. Use ChatGPT, Claude AI, or Gemini to create three professional-summary options. Choose the one that feels accurate, clear, and natural. Then revise the wording until it sounds like your real professional voice.

SIX. IMPROVE YOUR COVER LETTER

WHAT THIS MEANS

A cover letter gives you space to explain why your experience connects to a specific opportunity. Your resume shows the facts. Your cover letter helps the employer understand the story behind those facts. It should explain why you are interested in the role, which parts of your experience are most relevant, what problems you can help solve, and how your background aligns with the employer's needs. A strong cover letter should not simply repeat your resume. It should add context.

WHY THIS MATTERS

Many people skip the cover letter or write one generic version for every application. A thoughtful cover letter can help you explain a career change, a gap in employment, transferable skills from a different industry, or why your background is more relevant than it may appear at first glance. The goal is to make the connection between your experience and the opportunity easier to understand.

RECOMMENDED AI PLATFORMS

- ChatGPT
- Claude AI
- Gemini

Perplexity may also be helpful when you want to research the company before writing.

HOW TO BEGIN

Gather your resume, the full job description, the company website, your most relevant strengths, and one or two accomplishments that connect to the role. Ask AI which parts of your experience best match the role and how to explain your interest without sounding generic. Always review the final draft carefully and remove any wording that feels exaggerated or disconnected from your real voice.

PRACTICAL EXAMPLE

A weak opening: "I am writing to apply for the position. I believe I would be a great fit because I am hardworking and dependable."

A stronger opening: "I am interested in the Operations Coordinator position because my background includes customer support, time-sensitive decision-making, recordkeeping, and helping daily systems run smoothly in fast-paced environments." The stronger version connects the experience directly to the role.

YOUR FIRST ACTION STEP

Choose one job posting that interests you. Write down why the role interests you, three skills or experiences that connect to the position, one accomplishment that shows your value, and one reason the company stands out to you. Use ChatGPT, Claude AI, or Gemini to create a first draft. Review the draft and remove any language that does not sound like you.

SEVEN. STRENGTHEN YOUR LINKEDIN PROFILE

WHAT THIS MEANS

Your LinkedIn profile is more than an online resume. It is a professional visibility tool. It helps employers, recruiters, clients, collaborators, and professional contacts understand who you are, what you do, what strengths you bring, and what type of opportunities align with your experience. A strong LinkedIn profile should communicate a clear professional direction.

WHY THIS MATTERS

Someone may visit your LinkedIn profile before they contact you, interview you, recommend you, or consider working with you. If your profile is incomplete, outdated, or unclear, people may not understand the full value of your experience. A strong profile helps you present a clearer professional identity, highlight your strongest skills, and make it easier for people to understand the type of opportunities you are open to.

RECOMMENDED AI PLATFORMS

- ChatGPT
- Claude AI
- Gemini

Perplexity may also be useful when you want to research how professionals in your field describe their roles, skills, and career paths.

USE YOUR HEADLINE STRATEGICALLY

A weak headline: "Customer Service Representative." A stronger headline: "Customer Service and Operations Professional | Problem-Solving, Client Support, and Process Coordination." Your headline should communicate more than your current job title.

STRENGTHEN YOUR ABOUT SECTION

Your About section gives you space to explain your professional story in your own voice. It should help the reader understand your experience, your strengths, the problems you solve, the type of work you value, and the direction you are building toward.

USE THE FEATURED SECTION

Your Featured section can help people see your work instead of only reading about it. You may include a portfolio, a project, a case study, a professional article, a newsletter, a certification, a resume sample, a website, a video, or a resource you created.

YOUR FIRST ACTION STEP

Open your LinkedIn profile and review your headline, About section, three most important experience entries, skills list, and Featured section. Write down what feels clear, what feels outdated, and what does not match the direction you want to pursue. Use ChatGPT, Claude AI, or Gemini to create three headline options, a revised About section, and a stronger skills list. Make sure the final wording sounds like you.

EIGHT. RESEARCH CAREER PATHS THAT MATCH YOUR EXPERIENCE

WHAT THIS MEANS

Your next career step may not be obvious from your current job title. Many professionals know they want a change, but they are not sure which roles fit their experience. AI can help you explore realistic career paths that connect to the experience you already have and identify job titles, industries, and professional directions you may not have considered.

WHY THIS MATTERS

Your experience may qualify you for more than one type of role. Someone with a background in customer service may also have skills connecting to client support, administrative coordination, operations support, scheduling, workforce coordination, and account support. Someone with transportation experience may have skills connecting to dispatch support, route coordination, operations coordination, and logistics support. AI can help you see the connections.

RECOMMENDED AI PLATFORMS

- Perplexity
- ChatGPT
- Gemini
- Claude AI

Perplexity is especially useful when you want to research current job titles, employer expectations, industry trends, and training options.

RESEARCH BEFORE YOU APPLY

Do not rely on the job title alone. Two companies may use the same title for very different responsibilities. Before applying, review the full job description, required qualifications, company website, and salary range when available. Use Perplexity to research current information. Then use ChatGPT, Claude AI, or Gemini to help you compare the role with your experience.

YOUR FIRST ACTION STEP

Write down five transferable skills you already have, three types of tasks you enjoy, three responsibilities you handle well, the type of work environment you prefer, and whether you prefer on-site, hybrid, or remote work. Then use Perplexity, ChatGPT, Gemini, or Claude AI to identify ten realistic job titles that may fit your experience. Choose three roles to research further and notice which skills appear repeatedly.

NINE. IDENTIFY SKILL GAPS AND LEARNING PRIORITIES

WHAT THIS MEANS

Once you identify the types of roles you want, the next step is to understand the gap between where you are now and what employers are requesting. A skill gap is not a personal failure. It is simply the distance between your current experience and the qualifications, tools, or knowledge connected to your next opportunity.

AI can help you separate skills you already have, skills you need to describe more effectively, skills you need to refresh, skills you may need to learn, certifications that may be helpful, and training that may not be necessary.

WHY THIS MATTERS

You do not need to learn everything or collect certifications randomly. You need to understand which skills are most relevant to the direction you are pursuing. Another person may assume they need a new degree when the real gap is much smaller. They may only need a stronger resume, a clearer LinkedIn profile, a short certification, or a better understanding of the job titles that match their background. AI can help you identify the difference.

RECOMMENDED AI PLATFORMS

- Perplexity
- Claude AI
- ChatGPT
- Gemini

CREATE A LEARNING PRIORITY LIST

Organize your skill gaps into three categories. Priority One: skills you need now because they appear repeatedly in the roles you want, such as Excel, basic reporting, or interview storytelling. Priority Two: skills that may make you more competitive but are not required immediately, such as a short certification or a specialized software tool. Priority Three: skills that may be useful later but do not need your attention right now.

YOUR FIRST ACTION STEP

Choose three job postings for one role you are considering. Identify the five most frequently requested skills, the tools or software mentioned, and the required and preferred qualifications. Create three lists: skills I already have, skills I need to describe more clearly, and skills I need to strengthen or learn. Choose one learning priority for this week. Small, focused progress matters.

TEN. PREPARE FOR INTERVIEWS AND PROFESSIONAL CONVERSATIONS

WHAT THIS MEANS

A strong resume may help you get noticed. A strong interview helps you explain your value in real time. Many people know they have useful experience but struggle to talk about it clearly when they are nervous or trying to answer too quickly. AI can help you prepare before the conversation happens. It can help you practice common interview questions, organize your experience into clear stories, prepare examples of how you solved problems, and prepare questions for the employer.

WHY THIS MATTERS

Interviews often require you to translate your experience into stories. Questions such as "Tell me about yourself," "Tell me about a time you solved a problem," or "How do you prioritize tasks?" can feel simple until you are sitting in the interview trying to answer them. AI can help you prepare examples before the pressure is on and help you notice where your answers are too vague, too long, or missing an important connection to the role.

RECOMMENDED AI PLATFORMS

- ChatGPT
- Claude AI
- Gemini
- Perplexity

USE THE STAR METHOD

A simple way to organize your interview stories is the STAR method. Situation: What was happening? Task: What were you responsible for? Action: What did you do? Result: What happened because of your actions? AI can help you turn a scattered memory into a clear story using this structure.

PRACTICAL EXAMPLE

A weak answer to "Tell me about a time you handled a difficult customer": "I had difficult customers all the time. I usually tried to stay calm and help them."

A stronger answer: "During a busy shift, a customer became frustrated because they believed they had been charged incorrectly. I listened carefully, reviewed the transaction, explained what happened, and worked with the customer to resolve the issue calmly. By staying patient and focused, I was able to correct the problem and help the customer leave with a better experience." The stronger answer shows communication, active listening, problem-solving, and professional judgment.

YOUR FIRST ACTION STEP

Choose one role you are interested in. Use ChatGPT, Claude AI, or Gemini to generate ten interview questions connected to that role. Choose five questions. Write a first draft of your answer to each one. Ask AI to help you make the answer clearer and organize it using the STAR method. Practice saying the answers out loud. You need to sound prepared, honest, and clear.

ELEVEN. BUILD A PERSONALIZED CAREER ACTION PLAN

WHAT THIS MEANS

A strong career plan turns your ideas into clear next steps. Many people know they want a better job, a stronger resume, a more professional LinkedIn profile, or a new direction. The problem is that the goal can feel too large. AI can help you create a more focused plan: what to work on first, which tasks can wait, which opportunities deserve your attention, how much time to spend each week, and how to track your progress.

WHY THIS MATTERS

Career growth becomes easier when you stop treating every task as equally urgent. A strong action plan can help you avoid applying randomly, taking courses without a clear purpose, changing direction every few days, and spending too much time researching without taking action. The goal is to create a plan you can actually follow.

CREATE A FOUR-WEEK CAREER-POSITIONING PLAN

WEEK ONE

Clarify your direction. Identify your transferable skills. Choose three target roles. Review several job postings. Notice which skills appear repeatedly.

WEEK TWO

Strengthen your professional materials. Update your resume. Improve your professional summary. Revise your LinkedIn headline. Update your About section. Add relevant skills and certifications.

WEEK THREE

Build visibility and confidence. Connect with people in your field. Prepare a short professional introduction. Practice interview questions. Research companies. Apply for targeted opportunities.

WEEK FOUR

Review and adjust. Track which roles you applied for. Notice which applications received responses. Identify one learning priority. Update your materials when necessary. Repeat the process with stronger information.

BUILD A WEEKLY REVIEW HABIT

At the end of each week, ask: What did I complete? What created progress? What felt confusing? Which opportunities looked promising? What should I improve next week? What can I stop doing? AI can help you review your answers and adjust your plan.

YOUR FIRST ACTION STEP

Choose one career goal. Write down the role or direction you want to explore, the three most important tasks you need to complete, the amount of time you can realistically dedicate this week, one skill you want to strengthen, one application or networking goal, and one way you will track your progress. Use ChatGPT, Claude AI, or Gemini to turn the information into a simple seven-day plan. Choose progress over perfection.

WHY THESE ELEVEN STEPS WORK TOGETHER

Career positioning is not one task. It is a connected system. Your resume, LinkedIn profile, cover letter, interview answers, professional brand, learning priorities, and career goals should support one another. When these pieces are disconnected, your professional story can feel unclear.

UNDERSTAND YOUR VALUE

- One. Identify Your Transferable Skills
- Two. Uncover Accomplishments Hidden Inside Your Responsibilities
- Three. Clarify Your Professional Brand

These steps help you recognize the value already present in your experience. Before you can communicate your strengths clearly, you need to understand what they are.

PRESENT YOUR VALUE CLEARLY

- Four. Tailor Your Resume for a Specific Opportunity
- Five. Strengthen Your Professional Summary
- Six. Improve Your Cover Letter
- Seven. Strengthen Your LinkedIn Profile

These steps help you communicate your experience more strategically. Your professional materials should not feel like separate pieces. They should tell one clear story.

BUILD YOUR NEXT STRATEGY

- Eight. Research Career Paths That Match Your Experience
- Nine. Identify Skill Gaps and Learning Priorities
- Ten. Prepare for Interviews and Professional Conversations
- Eleven. Build a Personalized Career Action Plan

These steps help you turn awareness into action. Once you understand your value and communicate it clearly, you can make stronger decisions about where to apply, what to learn, how to prepare, and what to do next.

WHY THIS APPROACH MATTERS

AI can help you move through this process more intentionally. The goal is not to use AI for the sake of using AI. The goal is to use AI as a practical support tool. You are still responsible for your decisions, for reviewing the final wording, and for making sure your professional materials accurately reflect your real experience. AI helps you organize, clarify, and strengthen the process.

You do not have to do everything at once. Choose one step. Take one practical action. Then build from there.

CHOOSE YOUR SUPPORT PATH

You do not have to figure everything out alone. You also do not have to pay for more support than you need. The right next step depends on how much structure, feedback, and personalized guidance would help you move forward.

OPTION ONE: DIY CAREER POSITIONING SYSTEM

This option is for you if:

- You prefer to work independently.
- You want a clear step-by-step process.
- You are comfortable using AI tools with guided prompts.
- You want practical worksheets, examples, and checklists.
- You want to move at your own pace.

The DIY Career Positioning System is designed to help you apply the eleven steps in this guide more deeply. It can help you identify transferable skills, uncover accomplishments, clarify your professional brand, strengthen your resume, improve your LinkedIn profile, research realistic career paths, prepare for interviews, and build a personalized action plan.

OPTION TWO: ONE-ON-ONE CAREER POSITIONING SUPPORT

This option is for you if:

- You want personalized guidance.
- You are unsure which direction fits your experience.
- You need help reviewing your resume or LinkedIn profile.
- You want feedback on how you are presenting your value.
- You feel overwhelmed by the number of decisions you need to make.
- You want a clear next-step strategy based on your specific goals.

The complimentary call gives you space to explain what you are working through so you can identify the most appropriate next step. Start with the level of support that feels right for you.

START HERE THIS WEEK

You do not need to complete all eleven steps at once. Choose one area that would make the biggest difference in your career positioning right now. Then take one practical action.

STEP ONE: Choose your starting point.

- Do I need to clarify my strengths?
- Do I need to update my resume?
- Do I need to improve my LinkedIn profile?
- Do I need to research new career paths?
- Do I need to identify skill gaps?
- Do I need to prepare for an interview?
- Do I need a clearer action plan?

STEP TWO: Choose one AI platform.

Start with the tool that feels easiest to access and understand. ChatGPT may help you brainstorm, revise, and organize. Claude AI may help you review longer documents and compare materials. Perplexity may help you research current information. Gemini may help you brainstorm, plan, and explore options. You do not need to use all four.

STEP THREE: Take one practical action.

- Write down five transferable skills.
- Review one resume section.
- Rewrite one professional summary.
- Update one LinkedIn headline.
- Research three possible job titles.
- Compare three job postings.
- Identify one skill gap.
- Practice three interview questions.
- Create a seven-day career-action plan.

STEP FOUR: Review what you created.

Ask yourself: Does this reflect my real experience? Does the wording sound like me? Is the message clear? Is anything exaggerated? What needs to be improved? What should I work on next?

STEP FIVE: Choose your next level of support.

Continue independently:

YOUR SIMPLE SEVEN-DAY CHECKLIST

Day One: Choose one career-positioning goal.

Day Two: Gather the information you need.

Day Three: Use one AI platform to complete one task.

Day Four: Review and revise the result.

Day Five: Update one professional asset.

Day Six: Research one next step.

Day Seven: Decide what you will work on next week.

Small, focused progress matters. You do not need to fix everything at once. You need to begin.

RESPONSIBLE AI USE REMINDER

AI can be a powerful support tool. It can help you organize your thoughts, identify patterns, improve clarity, research possibilities, and prepare more effectively. But AI should not replace your judgment. Your professional materials must accurately reflect your real experience.

DO NOT ALLOW AI TO:

- Invent qualifications you do not have
- Add accomplishments you cannot support
- Create job duties you never performed
- Exaggerate your experience
- Misrepresent your education or certifications
- Write statements that do not sound like you
- Make decisions without your review

AI can help you communicate your value more clearly. It should not create a fictional version of you.

REVIEW EVERYTHING CAREFULLY

Before using AI-generated wording in your resume, LinkedIn profile, cover letter, portfolio, or interview preparation, ask yourself: Is this accurate? Does this reflect my real experience? Can I explain this clearly in an interview? Does this sound natural? Is anything exaggerated? Is anything missing?

USE AI AS A THINKING PARTNER

You bring your experience, judgment, values, goals, and professional voice. AI helps you organize, clarify, research, compare, revise, and prepare. The final decision belongs to you.

PROTECT YOUR PERSONAL INFORMATION

Be thoughtful about what you share with any AI platform. Avoid entering sensitive information unless it is necessary. Do not share Social Security numbers, bank-account information, passwords, private client information, confidential employer information, or sensitive documents. When reviewing a resume, remove information that is not needed for the task.

VERIFY CURRENT INFORMATION

When researching job titles, companies, certifications, salary ranges, or industry trends, confirm important information before making a decision. Use reliable sources. Check the company website. Confirm whether a certification is required or simply preferred. AI can help you move faster. Your judgment helps you move wisely.

Use AI to strengthen the truth. Do not use AI to replace the truth.
